- Learn to execute code
- Learn to use chat GPT

What you are going to build:

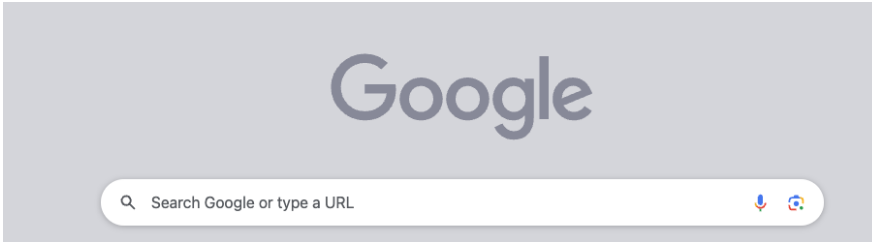

- List the patients on a FHIR server, displaying their name, gender and date of birth
- Create patients by submitting a form with the patient's name, gender, date of birth and phone number (Proper validation needs to be done on all fields).
- Allow update of all patients who are on the FHIR server by opening them on the same form and updating details.
- Search patients by their name or phone number.

The screenshot shows a 'Add webform' dialog box with a dark header bar containing a close button (X). The form contains the following fields and controls:

- Title***: A text input field with a green border.
- Administrative description**: A rich text editor with a toolbar containing icons for bold, italic, underline, strikethrough, link, unlink, list, indent, outdent, and source. Below the toolbar is a large text area.
- Category**: A dropdown menu currently showing '- None -'.
- Status**: Two radio buttons, 'Open' (which is selected) and 'Closed'.
- Save**: A blue button at the bottom right of the dialog.
